OACS-E
Content Modules
Tools that support standards based instruction for students with Significant Cognitive Disabilities

S. Benson & K. Staugler (2013) SST Summer Institute
Both NCLB and IDEA brought forth the importance of content rich instruction for ALL students, including those who previously were not considered capable of learning academic skills.

S. Benson, K. Staugler (2013) SST Summer Institute
The skill sets associated with these standards represent important learning for all students, including those with significant cognitive disabilities. (Kearns, et al. 2011)

- So... Ohio has designed modules to support this very important work.  
  
  S. Benson, K. Staugler (2013) SST Summer Institute
Purpose of the Modules

- To expand the knowledge of teachers supporting students with significant cognitive disabilities enhancing their ability to provide active learning opportunities targeting Ohio’s New Learning Standards.

- Navigation

- Content Understanding

S. Benson, K. Staugler (2013) SST Summer Institute
The Modules will NOT...

- Teach everything there is to know about each strand/domain or standard.

- Provide ready-made lesson plans and materials for classroom instruction.
The Modules will...

- Provide a foundation for the development of meaningful standards based lessons.
- Describe an effective planning process.
- Give examples of relevant lessons and materials.
- Show the connection between standards, the IEP and Alternate Assessment processes.

S. Benson, K. Staugler (2013) SST Summer Institute
Modules have been..

- Carefully designed to relate specifically to the instruction of students with significant cognitive disabilities.

- Referenced with best practice and research-based evidence.

- Reviewed by intervention and content representatives.

S. Benson, K. Staugler (2013) SST Summer Institute
The Modules: currently online

- **Module 1: What are Extended Academic Content Standards?**

  - Describe the academic content standards for general education in the state of Ohio, including Ohio’s New Learning Standards (Common Core Standards for ELA and Mathematics and Ohio’s Revised Academic Content Standards for Science and Social Studies)
  - Identify the purpose and structure of the OACS-E

S. Benson, K. Staugler (2013) SST Summer Institute
Module 2: General Curriculum for Students with Significant Cognitive Disabilities

- Recognize the alignment of the general curriculum for students with significant disabilities.
- Recognize beliefs that will facilitate blending of functional and academic content learning.

S. Benson, K. Staugler (2013) SST Summer Institute
The Modules: currently online

- **Module 3 - Planning for Instruction and Assessment for Students with Significant Cognitive Disabilities**
  
  Understand the planning process to develop instruction and assessment using both the OACS and the OACS-E for students with significant cognitive disabilities.

S. Benson, K. Staugler (2013) SST Summer Institute
The Modules: What’s next?

- **Module 4: Aligning Instruction to the Ohio English Language Arts Content Standards-Extended**
- **Module 5: Aligning Instruction to the Ohio Mathematics Content Standards-Extended**
- **Module 6: Aligning Instruction to the Ohio Science Content Standards-Extended**
- **Module 7: Aligning Instruction to the Social Studies Content Standards-Extended**

S. Benson, K. Staugler (2013) SST Summer Institute
Sneak Peek
Language
Arts

S. Benson, K. Staugler (2013) SST Summer Institute
The importance of Language Arts

The ELA standards include skills in:
- Reading
- Writing
- Speaking
- Listening
- Language/Communication
- And are Integrated into Other Subjects

S. Benson, K. Staugler (2013) SST Summer Institute
Balanced Literacy is a flexible framework where all students are valued, knowing that each learner may need a variety of strategies to become an effective reader.

(Carnihan & Williamson, 2010; Fountas & Pinnell, 1996)

- LA strands should be evidenced throughout instruction every day.

S. Benson, K. Staugler (2013) SST Summer Institute
Have you seen these in the classroom?

- Shared Reading (Reading Aloud)
- Writing
- Guided Reading
- Self-Selected Reading
- Word Work/Study
- Phonics
Guided Reading/Writing:
(Fountas and Pinnell, 1996, 2001)

- The heart of balanced literacy
- Brings together homogeneous groups of readers
- Teaches to skill gaps in small groups
- Offers explicit teaching
- Students engage with level specific text as defined through data

S. Benson, K. Staugler (2013) SST Summer Institute

**Tools at the Table**
- Sticky Notes
- Graph paper
- Reading phones
- Space stick/chip
- Wikki Stix
- Audio/Video recorder
- PCS symbols
- Highlighters
- Colored Overlays
- Technology tools
- Pencil grips
- Highlighter tape
- Leveled books
- AAC devices
- Data sheets

S. Benson, K. Staugler (2013) SST Summer Institute
As a student listens to a book it is essential that they connect with the text through their senses.

- Builds connections to schema
- Extracts real life meaning from text
- Increases engagement
- Connects therapy with content

S. Benson, K. Staugler (2013) SST Summer Institute

S. Benson, K. Staugler (2013) SST Summer Institute
Technology Enhanced Literacy Experiences

- Full range of high and low tech options
- Includes instructional and assistive technology
- Enhances access, participation and independence
- Increases multiple means opportunities
- Includes online and classroom resources
- Practices generalization of skills

S. Benson, K. Staugler (2013) SST Summer Institute
Have you seen this in the classroom?
Building writing skills requires integration of multiple skill areas (Light and McNaughten 2012)

- Narrative skills
- Language structures for phrases and sentences.
- Phoneme segmentation skills to breakdown words into component sounds
- Letter sound correspondence to encode sounds into written letters
- Spelling skills
- Handwriting or keyboarding skills
- Knowledge of conventions of writing, such as capitalization and punctuation.
- Planning, composing and revising.

S. Benson & K. Staugler (2013) SST Summer Institute

Journaling

Step Book

S. Benson, K. Staugler (2013) SST Summer Institute
Adapted text and other instructional materials (including those that are teacher-created) **must** be provided to match ability levels and increase access, active participation and independence. (Musselwhite, Erickson & Ziolkowski, 2002)

- Use simple and consistent sentence structures.
- Predictable sentences.
- Heavy repetition of individual words within a given passage or story.
- Include heavy use of high frequency and decodable words.
- Provide a close picture-to-text match.
- Control the number of sentences per page. (2 – 4 per page for beginning readers)
- Control the number of pages for the complete story or passage. (approximately 8 – 10 pages)

Sneak Peek Mathematics
A New Look in Mathematics

- **Common Core Practices:**
  - Make sense of problems
  - Reason abstractly and quantitatively
  - Construct viable arguments
  - Model with mathematics
  - Use appropriate tools strategically
  - Attend to precision
  - Look for and make sense of structure
  - Look for repeated reasoning

S. Benson, K. Staugler (2013) SST Summer Institute
How the Brain Learns
(David Sousa 2011).

"[Students] may diligently follow the teacher's instructions to perform a task repeatedly, and may even get the correct answers, but if they have not found meaning after the learning episode, there is little likelihood of long-term storage.”

S. Benson, K. Staugler (2013) SST Summer Institute
Which way will produce meaning?

$$3 + 4$$

OR

S. Benson, K. Staugler (2013) SST Summer Institute
A framework to move each student forward at his or her own developmental level.
(Fosnot and Dolk, 2001)

- **Strategies**: observable organization schemes to solve problems.

- **Big Ideas**: central, organizing ideas of mathematics

- **Models**: mental maps of relationships that can be used as tools when solving problems

S. Benson, K. Staugler (2013) SST Summer Institute
Have you seen this in the classroom?
Problem Solving Tasks
(VandeWalle and Lovin, 2006)

- The problem begins where the students are.

- The problem must focus understanding of the mathematical ideas that are to be learned.

- The problem must provide ways for students to explain or show their solution method as part of the problem solving scope.

S. Benson, K. Staugler (2013) SST Summer Institute
How many ways can you think of to solve this problem?

25 + 5 + 15

What tools and strategies might you use to show the solution to the problem?
Have you seen this in the classroom?
problem solving application

(Jimenez 2011)

- Begin with a problem that has real meaning to the student’s life.
- Present the problem in a story or scenario.
- Use math symbols to represent the problem.
- Solve the problem within a graphic organizer model.
- Apply the solution back to real life.

S. Benson, K. Staugler (2013) SST Summer Institute
Have you seen this in the classroom?

**Big Ideas:**
- Multiplication involved counting like size groups to determine how many in all.
- Multiplication and division are related.

**Drew has 3 bags of cookies. Each bag has 5 cookies. How many cookies altogether?**

- Early learners will likely count out 3 sets of 5 cookies and then count by ones to find how many.
- Skip counting may be used to solve this... 5, 10, 15.
- Repeat adding might be used to solve this... 5 + 5 = 10 + 5 = 15.
Have you seen this in the classroom?

- The class is forming 4 groups to work on a science experiment. There are 24 students in the class. How many students are in each group?
  - Make 4 groups by adding one person at a time to each group until there are 24 people.
  - 4 groups, _____ in each group
  - Using a division sentence: 24 + 4 = 6
Introduction to fractions generally involves equal sharing

- There are eight cookies in the cookie jar. How many cookies will Paige and her three friends each get?
Have you seen this in the classroom?

- How can four candy bars be shared with 6 children?
Three steps to help students develop a conceptual understanding of measurement. 
(Van de Walle and Lovin (2006))

- Making Comparisons.
- Using Models of Units.
- Using Measurement Tools.
Have you seen this in the classroom?

- Drew is using a quart jar to fill his fish tank. Estimate how many quarts of water it will take to fill the tank.

Have you seen these in the classroom?
Importance of teaching vocabulary in addition to scientific inquiry.
(Jimenez 2012)

- Offer multiple options and examples
- Match vocabulary to grade level standards
- Use age/grade appropriate vocabulary during instruction and assessment
- Pre-teach new vocabulary using imagery and real life examples as priming for content based instruction

S. Benson, K. Staugler (2013) SST Summer Institute
Have you seen this in the classroom?
Apply the science to real life.
(Jimenez 2012)
Science is a process in which scientists “conduct” science. (Jimenez 2012)

- Use a variety or tools
- Active participation
- Make predictions/hypothesize
- Collaborate/engage with others (peers and adults)
- Document findings
- Ask questions

S. Benson, K. Staugler (2013) SST Summer Institute
Offer many hands-on-learning opportunities. (Jimenez 2012)
Sneak Peek
Social Studies
The National Council for the Social Studies (NCSS) has named ten themes that address the instruction of social studies.

- Culture
- Time, continuity, and change;
- People, places, and environments;
- Individual development and identity;
- Individuals, groups, and institutions;
- Power, authority, and governance;
- Production, distribution, & consumption;
- Science, technology, and society;
- Global connections; and
- Civic ideals and practices.

(NCSS, 2002)
These themes are to be taught within five disciplinary standards (strands) that compose a social studies curriculum (NCSS, 2002)

- History
- Geography
- Civics and Government
- Economics
- Psychology
