

Task Analysis

Task Analysis Checklist use:

- Check off the skills that each student can successfully demonstrate beginning on the right side and work toward the grade level standard
- Plot each student's skills until the point at which they can no longer perform the skills – this is their baseline
- Skills to the left of each student's baseline must be taught
- Assistive Technology can scaffold over skills to the left of the student's baseline and in some cases can move their baseline closer to the standard

Directions: Write all of the small steps of prior knowledge or skill that each student must know prior to the standard onto individual sticky notes

Order sticky notes containing pre-knowledge steps into sequential order from lowest level to the grade level standard

Add extended knowledge skills after the standard if needed.

Write skills onto the task analysis checklist to use as an assessment tool to capture baseline skill, learning target and learning progressions during instruction.

Note: This checklist may be presented in a horizontal or vertical format.
